

### **Khoba model of Development :**

Khoba model of development is unique and is based on Yogdan philosophy of contribution of haves to not haves in whatsoever form it is available.

It is a tripartite programe where government departments are requested to carry out the developmental work as per the various on going schemes .

Those works for which there is no scope under the existing government set up are taken up through specialized NGOs working in the area of toilets construction etc.

Rest of the work is carried out by direct donations from a group of individuals who are closely associated with charitable activities.

In all the development work the local residents are active participants in initiating the various projects and they also contribute labour part either free of cost or in exchange of quality food material.

### **Plans for future :**

We would like to implement Khoba development programe as a model for development of nearby 10 remote poor tribal villages of Gujarat Maharashtra border in Districts Valsad and Nasik.
